

Deprimus

Software Developer

deprimus.vercel.app | github.com/deprimus01 | linkedin.com/in/deprimus01 | deprimus01@gmail.com

SUMMARY

Software developer focused on building practical full-stack web applications with React, Node.js, and PostgreSQL. Currently deepening knowledge of backend architecture, APIs, and authentication, with an additional interest in video editing and visual design.

SKILLS

Frontend: React, JavaScript, HTML5, CSS3, Vite

Backend: Node.js, Express

Database: PostgreSQL, SQLite

Tools: Git, GitHub, VS Code, Linux

PROJECTS

ScholarLog — scholarlog.online

Student productivity platform for notes, assignments, planning, revision, GPA tracking, reflections, and study progress. Built with React, Node.js, and PostgreSQL.

Deprimus Tech Store

Inventory and sales management system designed for an electronics and accessories business. Built with Node.js and PostgreSQL.

Primus Schools

School website and application system built during a SIWES internship placement. Built with HTML, CSS, JavaScript, Express, and SQLite.

Deprimus Portfolio — deprimus.vercel.app

Personal developer portfolio and creative space. Built with React and Vite.

CURRENTLY LEARNING

Backend architecture, REST API design, authentication systems, and scalable system design.
